PREvention Strategies for Adolescents at Risk of type 2 Diabetes

A pilot study across five European countries

This is a 24 month project funded by the European Commission involving the UK, Germany, Portugal, Spain and Greece. The project is split into two phases. Both phases have now closed to recruitment and final data analysis is underway (as of 15th November 2017).

The first phase is to develop a tool for the identification of adolescents aged 12-14 years who are at increased risk of developing Type 2 Diabetes in the future.

The second phase is the development and evaluation of a lifestyle intervention for 12-14 year old adolescents who may be at an increased risk of developing Type 2 Diabetes in the future.

Don't forget to re-visit this website early 2018 to find out about the results.

Rapid Detection and control system for Antimicrobial Resistance

Public Procurement of Innovation

RaDAR is a European Commission co-funded project that aims to address the urgent need of rapid detection and effective infection control systems for antimicrobial resistance (AMR).

The RaDAR Buyers Group, composed of four public procurement organisations from Spain, France and Italy, will implement a cross-border collaborative procurement of innovative solutions capable of facing the challenge of AMR.

RaDAR aims to promote the adoption of innovations to:

Bring value to the health system and foster its digital transformation

Contribute to public decision-making in alignment with EU Health policies

Increase SME access to public tenders and contracts

Contribute to the achievement of the Sustainable Development Goals
